

Food Industry Growth with SimplyFood & Acumatica

Quality & Traceability

User defined quality notes and parameters located throughout production process

Attach compliance docs to raw material receipt, finished goods, sales orders, and customers for easy reference

Standard inquiries that allow for very quick tracing of lots in the event of a recall notice or audit

Order Management

B2B website: Give business customers secure portal access for self service

B2C website: integrate all aspects like customers, products, orders, shipments into Acumatica from your B2C site

EDI: automatically process orders and shipping notices

KEYS TO BUSINESS GROWTH

Food Production

Production on one line or multiple lines - scalability is within grasp

Easily adjust recipes and track revisions

Issue materials based on expiration date and verify lot numbers prior to production

Create different package sizes of finished goods from the same production lot

Integrated yield management

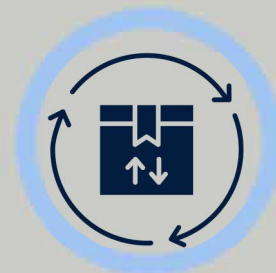

Integrated scheduler for workorder management

Supply Chain Management

Products: ship from finished goods at multiple warehouses and locations with lot number control

WMS: use fast, mobile scanners for receiving, management, pick, pack, and ship

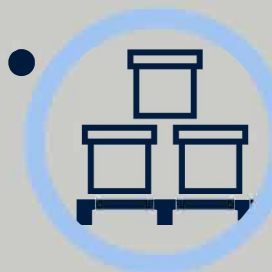

Inventory & Planning

Allocate & optimize product across multiple production facilities and warehouses

Forecasting: view current sales & purchasing activity to build business plans

MRP: schedule material for each location
